

## Parameters for radius 5

oevkaya

7/4/2021

Use of parameters allows us to get results for repeated things !

```
x <- params$rad # radius of a circle  
area <- pi * x^2
```

For a circle with the radius 5, its area is 78.5398163.

Possible to use more than one parameters:

For a circle with the radius 5, its area is 78.5398163.

Above, the generated uniform values are 0.0893592, 0.8293098, 0.4741284

$$x = f(y^2) + g(y)$$

$$x = f(y^2) + g(y)$$
